Point-of-need support

PayJustNow Customer Questions Guide

Use this guide when a customer needs help with a PayJustNow question.

01

I am not getting a QR code.

Check that the mobile number on the PayJustNow account is correct. The customer can update it under Account Details on the customer portal.

02

My OTP has not arrived.

Ask the customer to select Resend Code. If it still does not arrive, restart the phone and try again, or contact the mobile network provider. If the problem continues, use the PayJustNow Customer Support form.

03

How can I use money in my PayJustNow wallet?

Wallet funds can be used for a new purchase, an early payment on an existing order, or a withdrawal to a South African bank account. Withdrawals made before 16:00 are processed by overnight EFT and reflect the next business day.

04

Why has my saved card disappeared?

The bank may have blocked PayJustNow from using the card after a failed debit attempt. Check that the card is active, enabled for online purchases and has enough funds. If the problem continues, the customer can use instant EFT or another card.

05

How can I pay early or settle my balance?

In the PayJustNow customer portal, select View Order, select Make Payment, choose the next instalment or full outstanding balance, then select Make Payment again to confirm.

06

How can I change a lost, expired or declined card?

In the customer portal, open View Order and select Make Payment. Choose the amount, select Add New Card Details, enter the new card details and select Pay Now.

07

What do I need for my first PayJustNow order?

The customer provides a name, contact details and South African ID number. PayJustNow completes a credit and ID check. Once approved, the customer can use an accepted card.

08

Where can I check the payment-plan details?

Use the first PayJustNow course for the approved payment-plan explanation.
